Introduction to Wood Finishing
May 18-19, 2019

Greetings,

It will be my pleasure to return to the MASW and have the opportunity to share with you the art and science of wood finishing.

This two day class is an excellent way to get you started on the various ways to color wood and choose a protective finish for your projects.

Wood finishing can be rather confusing and intimidating, but it does not have to be. Once you understand the various components and how they work together, it is easy to put together a wood finishing system.

It is important to me that you develop your own system of finishing based on: what options you have for finishing supplies and where you are going to do your finishing.

The goal is to discover your finishing system and perfect it - BEFORE you build your next project.

Syllabus

1. Wood Identification
2. Abrasives
3. Surface Preparation
4. Coloring Agents
5. Finish Choices
6. Tools for applying finishes: rags, brushes, spraying
7. Waxes and Polishes

Tools: None
