Spot Repair and Touch Up with Mitch Kohanek

May 16-17, 2020

Greetings,

This is a basic introductory class on how to repair nicks, dents and scratches to wood and its coatings using the same tools and techniques professionals use.

Water rings, heat damage, burns and small missing pieces of veneer and larger repairs such as crushed corners will also be taught. You will be working on samples that I have put together so that you can experience a start to finish repair.

There are two Tool Lists shown below. The first Tool List are tools you will need to purchase to have in class on day one.

The second list are materials MASW has purchased for you to experiment with. By the end of the class you can decide which materials worked best for you.

Order the first Tool List as soon as possible to make sure you have it for day one of this class.

If you already have a repair kit, cross check what you have with the tools and materials listed below. I would suggest your kit comes as close as you can with what I have listed.

None of these tools or materials will be for sale at MASW.

Tool List #1

You will need to purchase the following items. I have made arrangements with Westlund Distributing to put together a kit for you.

Contact Westlund Distributing at 800-325-6878 and ask for kit Quote 3996.

The company I am working with put together a web page that the students can use to purchase their kit.

<https://www.westlunddistributing.com/catalog/product/view/id/233810/>

The base price of this kit is \$272.01. There will be tax and shipping charges added to this amount which will be dependent on your shipping address.
